Source code should be indented consistently		Code Smell
Tabulation characters should not be used		Code Smell

Track breaches of an XPath rule

Analyze your code

-  Code Smell
-  Major
- 

This rule allows the definition of custom rules using XPath expressions.

Issues are created depending on the return value of the XPath expression. If the XPath expression returns:

- a single or list of AST nodes, then a line issue with the given message is created for each node
- a boolean, then a file issue with the given message is created only if the boolean is true
- anything else, no issue is created

Here is an example of an XPath expression to log an issue on each 'td' tag using the 'nowrap' deprecated attribute:

```
//td[@nowrap]
```
