Welcome

Welcome to the AWS Amplify UI Builder API documentation. This reference provides descriptions of the actions and data types for the Amplify UI Builder API.

The Amplify UI Builder API provides a programmatic interface for creating and configuring user interface (UI) component libraries and themes for use in your Amplify applications. You can then connect these UI components to an application's backend AWS resources.

You can also use the Amplify Studio visual designer to create UI components and model data for an app. For more information, see [Introduction](#) in the *Amplify Docs*.

The Amplify Framework is a comprehensive set of SDKs, libraries, tools, and documentation for client app development. For more information, see the [Amplify Framework](#). For more information about deploying an Amplify application to AWS, see the [Amplify User Guide](#).

This document was last published on November 23, 2022.

Actions

The following actions are supported:

- [CreateComponent \(p. 3\)](#)
- [CreateForm \(p. 30\)](#)
- [CreateTheme \(p. 36\)](#)
- [DeleteComponent \(p. 39\)](#)
- [DeleteForm \(p. 41\)](#)
- [DeleteTheme \(p. 43\)](#)
- [ExportComponents \(p. 45\)](#)
- [ExportForms \(p. 59\)](#)
- [ExportThemes \(p. 63\)](#)
- [GetComponent \(p. 66\)](#)
- [GetForm \(p. 80\)](#)
- [GetMetadata \(p. 84\)](#)
- [GetTheme \(p. 86\)](#)
- [ListComponents \(p. 89\)](#)
- [ListForms \(p. 91\)](#)
- [ListThemes \(p. 93\)](#)
- [PutMetadataFlag \(p. 95\)](#)
- [ResetMetadataFlag \(p. 97\)](#)
- [UpdateComponent \(p. 99\)](#)
- [UpdateForm \(p. 126\)](#)
- [UpdateTheme \(p. 132\)](#)

CreateComponent

Creates a new component for an Amplify app.

Request Syntax

```
POST /app/appId/environment/environmentName/components?clientToken=clientToken HTTP/1.1
Content-type: application/json
```

```

URI Request Parameters

The request uses the following URI parameters.

[appId \(p. 3\)](#)

The unique ID of the Amplify app to associate with the component.

Required: Yes

[clientToken \(p. 3\)](#)

The unique client token.

[environmentName \(p. 3\)](#)

The name of the backend environment that is a part of the Amplify app.

Required: Yes

Request Body

The request accepts the following data in JSON format.

[componentToCreate \(p. 3\)](#)

Represents the configuration of the component to create.

Type: [CreateComponentData \(p. 157\)](#) object

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

entity (p. 16)

Describes the configuration of the new component.

Type: [Component \(p. 139\)](#) object

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 198\)](#).

InternalServerError

An internal error has occurred. Please retry your request.

HTTP Status Code: 500

InvalidParameterException

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

ResourceConflictException

The resource specified in the request conflicts with an existing resource.

HTTP Status Code: 409

ServiceQuotaExceeded

You exceeded your service quota. Service quotas, also referred to as limits, are the maximum number of service resources or operations for your AWS account.

HTTP Status Code: 402

CreateForm

Creates a new form for an Amplify app.

Request Syntax

```
POST /app/appId/environment/environmentName/forms?clientToken=clientToken HTTP/1.1
Content-type: application/json
```

```
{
  "formToCreate": {
    "cta": {
      "cancel": {
        "children": "string",
        "excluded": boolean,
        "position": {
          "below": "string",
          "fixed": "string",
          "rightOf": "string"
        }
      },
      "clear": {
        "children": "string",
        "excluded": boolean,
        "position": {
          "below": "string",
          "fixed": "string",
          "rightOf": "string"
        }
      },
      "position": "string",
      "submit": {
        "children": "string",
        "excluded": boolean,
        "position": {

}
```

URI Request Parameters

The request uses the following URI parameters.

[appId \(p. 30\)](#)

The unique ID of the Amplify app to associate with the form.

Required: Yes

[clientToken \(p. 30\)](#)

The unique client token.

[environmentName \(p. 30\)](#)

The name of the backend environment that is a part of the Amplify app.

Required: Yes

Request Body

The request accepts the following data in JSON format.

[formToCreate \(p. 30\)](#)

Represents the configuration of the form to create.

Type: [CreateFormData \(p. 159\)](#) object

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "entity": {
    "appId": "string",
    "cta": {
      "cancel": {

```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

entity (p. 32)

Describes the configuration of the new form.

Type: [Form \(p. 168\)](#) object

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 198\)](#).

InternalServerError

An internal error has occurred. Please retry your request.

HTTP Status Code: 500

InvalidParameterException

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

ResourceConflictException

The resource specified in the request conflicts with an existing resource.

HTTP Status Code: 409

ServiceQuotaExceededException

You exceeded your service quota. Service quotas, also referred to as limits, are the maximum number of service resources or operations for your AWS account.

HTTP Status Code: 402

CreateTheme

Creates a theme to apply to the components in an Amplify app.

Request Syntax

```
POST /app/appId/environment/environmentName/themes?clientToken=clientToken HTTP/1.1
Content-type: application/json

{
  "themeToCreate": {
    "name": "string",
    "overrides": [
      {
        "key": "string",
        "value": {
          "children": [
            "ThemeValues"
          ],
          "value": "string"
        }
      }
    ],
    "tags": {
      "string": "string"
    },
    "values": [
      {
        "key": "string",
        "value": {
          "children": [
            "ThemeValues"
          ],
          "value": "string"
        }
      }
    ]
  }
}
```

URI Request Parameters

The request uses the following URI parameters.

appId (p. 36)

The unique ID of the Amplify app associated with the theme.

Required: Yes

clientToken (p. 36)

The unique client token.

environmentName (p. 36)

The name of the backend environment that is a part of the Amplify app.

Required: Yes

Request Body

The request accepts the following data in JSON format.

themeToCreate (p. 36)

Represents the configuration of the theme to create.

Type: [CreateThemeData \(p. 161\)](#) object

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "entity": {
    "appId": "string",
    "createdAt": number,
    "environmentName": "string",
    "id": "string",
    "modifiedAt": number,
    "name": "string",
    "overrides": [
      {
        "key": "string",
        "value": {
          "children": [
            "ThemeValues"
          ],
          "value": "string"
        }
      }
    ],
    "tags": {
      "string" : "string"
    },
    "values": [
      {
        "key": "string",
        "value": {
          "children": [
            "ThemeValues"
          ],
          "value": "string"
        }
      }
    ]
  }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

[entity \(p. 37\)](#)

Describes the configuration of the new theme.

Type: [Theme \(p. 184\)](#) object

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 198\)](#).

InternalServerError

An internal error has occurred. Please retry your request.

HTTP Status Code: 500

InvalidArgumentException

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

ResourceConflictException

The resource specified in the request conflicts with an existing resource.

HTTP Status Code: 409

ServiceQuotaExceededException

You exceeded your service quota. Service quotas, also referred to as limits, are the maximum number of service resources or operations for your AWS account.

HTTP Status Code: 402

DeleteComponent

Deletes a component from an Amplify app.

Request Syntax

```
DELETE /app/appId/environment/environmentName/components/id HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

appId (p. 39)

The unique ID of the Amplify app associated with the component to delete.

Required: Yes

environmentName (p. 39)

The name of the backend environment that is a part of the Amplify app.

Required: Yes

id (p. 39)

The unique ID of the component to delete.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 198\)](#).

InternalServerError

An internal error has occurred. Please retry your request.

HTTP Status Code: 500

InvalidArgumentException

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

ResourceNotFoundException

The requested resource does not exist, or access was denied.

HTTP Status Code: 404

DeleteForm

Deletes a form from an Amplify app.

Request Syntax

```
DELETE /app/appId/environment/environmentName/forms/id HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

appId (p. 41)

The unique ID of the Amplify app associated with the form to delete.

Required: Yes

environmentName (p. 41)

The name of the backend environment that is a part of the Amplify app.

Required: Yes

id (p. 41)

The unique ID of the form to delete.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 198\)](#).

InternalServerError

An internal error has occurred. Please retry your request.

HTTP Status Code: 500

InvalidArgumentException

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

ResourceNotFoundException

The requested resource does not exist, or access was denied.

HTTP Status Code: 404

DeleteTheme

Deletes a theme from an Amplify app.

Request Syntax

```
DELETE /app/appId/environment/environmentName/themes/id HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

appId (p. 43)

The unique ID of the Amplify app associated with the theme to delete.

Required: Yes

environmentName (p. 43)

The name of the backend environment that is a part of the Amplify app.

Required: Yes

id (p. 43)

The unique ID of the theme to delete.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 198\)](#).

InternalServerError

An internal error has occurred. Please retry your request.

HTTP Status Code: 500

InvalidArgumentException

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

ResourceNotFoundException

The requested resource does not exist, or access was denied.

HTTP Status Code: 404

ExportComponents

Exports component configurations to code that is ready to integrate into an Amplify app.

Request Syntax

```
GET /export/app/appId/environment/environmentName/components?nextToken=nextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

appId (p. 45)

The unique ID of the Amplify app to export components to.

Required: Yes

environmentName (p. 45)

The name of the backend environment that is a part of the Amplify app.

Required: Yes

nextToken (p. 45)

The token to request the next page of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

[entities \(p. 45\)](#)

Represents the configuration of the exported components.

Type: Array of [Component \(p. 139\)](#) objects

[nextToken \(p. 45\)](#)

The pagination token that's included if more results are available.

Type: String

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 198\)](#).

InternalServerError

An internal error has occurred. Please retry your request.

HTTP Status Code: 500

InvalidParameterException

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

ExportForms

Exports form configurations to code that is ready to integrate into an Amplify app.

Request Syntax

```
GET /export/app/appId/environment/environmentName/forms?nextToken=nextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

[appId \(p. 59\)](#)

The unique ID of the Amplify app to export forms to.

Required: Yes

[environmentName \(p. 59\)](#)

The name of the backend environment that is a part of the Amplify app.

Required: Yes

[nextToken \(p. 59\)](#)

The token to request the next page of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

entities (p. 59)

Represents the configuration of the exported forms.

Type: Array of [Form \(p. 168\)](#) objects

nextToken (p. 59)

The pagination token that's included if more results are available.

Type: String

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 198\)](#).

InternalServerError

An internal error has occurred. Please retry your request.

HTTP Status Code: 500

InvalidArgumentException

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

ExportThemes

Exports theme configurations to code that is ready to integrate into an Amplify app.

Request Syntax

```
GET /export/app/appId/environment/environmentName/themes?nextToken=nextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

appId (p. 63)

The unique ID of the Amplify app to export the themes to.

Required: Yes

environmentName (p. 63)

The name of the backend environment that is part of the Amplify app.

Required: Yes

nextToken (p. 63)

The token to request the next page of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "entities": [
    {

GetComponent

Returns an existing component for an Amplify app.

Request Syntax

```
GET /app/appId/environment/environmentName/components/id HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

appId (p. 66)

The unique ID of the Amplify app.

Required: Yes

environmentName (p. 66)

The name of the backend environment that is part of the Amplify app.

Required: Yes

id (p. 66)

The unique ID of the component.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

component (p. 66)

Represents the configuration settings for the component.

Type: [Component \(p. 139\)](#) object

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 198\)](#).

InternalServerError

An internal error has occurred. Please retry your request.

HTTP Status Code: 500

InvalidArgumentException

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

ResourceNotFoundException

The requested resource does not exist, or access was denied.

HTTP Status Code: 404

GetForm

Returns an existing form for an Amplify app.

Request Syntax

```
GET /app/appId/environment/environmentName/forms/id HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

[appId \(p. 80\)](#)

The unique ID of the Amplify app.

Required: Yes

[environmentName \(p. 80\)](#)

The name of the backend environment that is part of the Amplify app.

Required: Yes

[id \(p. 80\)](#)

The unique ID of the form.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "form": {
    "appId": "string",
    "cta": {
      "cancel": {

}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

form (p. 80)

Represents the configuration settings for the form.

Type: [Form \(p. 168\)](#) object

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 198\)](#).

InternalServerError

An internal error has occurred. Please retry your request.

HTTP Status Code: 500

InvalidParameterException

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

ResourceNotFoundException

The requested resource does not exist, or access was denied.

HTTP Status Code: 404

GetMetadata

Returns existing metadata for an Amplify app.

Request Syntax

```
GET /app/appId/environment/environmentName/metadata HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

appId (p. 84)

The unique ID of the Amplify app.

Required: Yes

environmentName (p. 84)

The name of the backend environment that is part of the Amplify app.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "features": {
    "string" : "string"
  }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

features (p. 84)

Represents the configuration settings for the features metadata.

Type: String to string map

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 198\)](#).

InvalidOperationException

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

UnauthorizedException

You don't have permission to perform this operation.

HTTP Status Code: 401

GetTheme

Returns an existing theme for an Amplify app.

Request Syntax

```
GET /app/appId/environment/environmentName/themes/id HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

appId (p. 86)

The unique ID of the Amplify app.

Required: Yes

environmentName (p. 86)

The name of the backend environment that is part of the Amplify app.

Required: Yes

id (p. 86)

The unique ID for the theme.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "theme": {
    "appId": "string",
    "createdAt": number,
    "environmentName": "string",
    "id": "string",
    "modifiedAt": number,
    "name": "string",
    "overrides": [
      {
        "key": "string",
        "value": {
          "children": [
            "ThemeValues"
          ],
          "value": "string"
        }
      }
    ]
  }
}
```

```
],
  "tags": {
    "string" : "string"
  },
  "values": [
    {
      "key": "string",
      "value": {
        "children": [
          "ThemeValues"
        ],
        "value": "string"
      }
    }
  ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

theme (p. 86)

Represents the configuration settings for the theme.

Type: [Theme \(p. 184\)](#) object

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 198\)](#).

InternalServerError

An internal error has occurred. Please retry your request.

HTTP Status Code: 500

InvalidArgumentException

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

ResourceNotFoundException

The requested resource does not exist, or access was denied.

HTTP Status Code: 404

ListComponents

Retrieves a list of components for a specified Amplify app and backend environment.

Request Syntax

```
GET /app/appId/environment/environmentName/components?  
maxResults=maxResults&nextToken=nextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

[appId \(p. 89\)](#)

The unique ID for the Amplify app.

Required: Yes

[environmentName \(p. 89\)](#)

The name of the backend environment that is a part of the Amplify app.

Required: Yes

[maxResults \(p. 89\)](#)

The maximum number of components to retrieve.

Valid Range: Minimum value of 1. Maximum value of 100.

[nextToken \(p. 89\)](#)

The token to request the next page of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200  
Content-type: application/json  
  
{  
  "entities": [  
    {  
      "appId": "string",  
      "componentType": "string",  
      "environmentName": "string",  
      "id": "string",  
      "name": "string"  
    }  
  ],  
  "nextToken": "string"  
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

entities (p. 89)

The list of components for the Amplify app.

Type: Array of [ComponentSummary \(p. 155\)](#) objects

nextToken (p. 89)

The pagination token that's included if more results are available.

Type: String

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 198\)](#).

InternalServerError

An internal error has occurred. Please retry your request.

HTTP Status Code: 500

InvalidParameterException

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

ListForms

Retrieves a list of forms for a specified Amplify app and backend environment.

Request Syntax

```
GET /app/appId/environment/environmentName/forms?maxResults=maxResults&nextToken=nextToken  
HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

appId (p. 91)

The unique ID for the Amplify app.

Required: Yes

environmentName (p. 91)

The name of the backend environment that is a part of the Amplify app.

Required: Yes

maxResults (p. 91)

The maximum number of forms to retrieve.

Valid Range: Minimum value of 1. Maximum value of 100.

nextToken (p. 91)

The token to request the next page of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200  
Content-type: application/json  
  
{  
  "entities": [  
    {  
      "appId": "string",  
      "dataType": {  
        "dataSourceType": "string",  
        "dataTypeName": "string"  
      },  
      "environmentName": "string",  
      "formActionType": "string",  
      "id": "string",  
      "name": "string"  
    }  
  ]  
}
```

```
  ],
  "nextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

[entities \(p. 91\)](#)

The list of forms for the Amplify app.

Type: Array of [FormSummary \(p. 177\)](#) objects

[nextToken \(p. 91\)](#)

The pagination token that's included if more results are available.

Type: String

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 198\)](#).

InternalServerError

An internal error has occurred. Please retry your request.

HTTP Status Code: 500

InvalidParameterException

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

ListThemes

Retrieves a list of themes for a specified Amplify app and backend environment.

Request Syntax

```
GET /app/appId/environment/environmentName/themes?maxResults=maxResults&nextToken=nextToken  
HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

appId (p. 93)

The unique ID for the Amplify app.

Required: Yes

environmentName (p. 93)

The name of the backend environment that is a part of the Amplify app.

Required: Yes

maxResults (p. 93)

The maximum number of theme results to return in the response.

Valid Range: Minimum value of 1. Maximum value of 100.

nextToken (p. 93)

The token to request the next page of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200  
Content-type: application/json  
  
{  
  "entities": [  
    {  
      "appId": "string",  
      "environmentName": "string",  
      "id": "string",  
      "name": "string"  
    }  
  ],  
  "nextToken": "string"  
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

entities (p. 93)

The list of themes for the Amplify app.

Type: Array of [ThemeSummary \(p. 186\)](#) objects

nextToken (p. 93)

The pagination token that's returned if more results are available.

Type: String

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 198\)](#).

InternalServerError

An internal error has occurred. Please retry your request.

HTTP Status Code: 500

InvalidParameterException

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

PutMetadataFlag

Stores the metadata information about a feature on a form.

Request Syntax

```
PUT /app/appId/environment/environmentName/metadata/features/featureName HTTP/1.1
Content-type: application/json

{
  "body": {
    "newValue": "string"
  }
}
```

URI Request Parameters

The request uses the following URI parameters.

appId (p. 95)

The unique ID for the Amplify app.

Required: Yes

environmentName (p. 95)

The name of the backend environment that is part of the Amplify app.

Required: Yes

featureName (p. 95)

The name of the feature associated with the metadata.

Required: Yes

Request Body

The request accepts the following data in JSON format.

body (p. 95)

The metadata information to store.

Type: [PutMetadataFlagBody](#) (p. 181) object

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 198\)](#).

InvalidArgumentException

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

UnauthorizedException

You don't have permission to perform this operation.

HTTP Status Code: 401

ResetMetadataFlag

Clears the stored metadata information about a feature on a form.

Request Syntax

```
DELETE /app/appId/environment/environmentName/metadata/features/featureName HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

appId (p. 97)

The unique ID for the Amplify app.

Required: Yes

environmentName (p. 97)

The name of the backend environment that is part of the Amplify app.

Required: Yes

featureName (p. 97)

The name of the feature associated with the metadata.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 198\)](#).

InvalidArgumentException

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

UnauthorizedException

You don't have permission to perform this operation.

HTTP Status Code: 401

UpdateComponent

Updates an existing component.

Request Syntax

```
PATCH /app/appId/environment/environmentName/components/id?clientToken=clientToken HTTP/1.1
Content-type: application/json
```

```
{
  "updatedComponent": {
    "bindingProperties": {
      "string" : {
        "bindingProperties": {
          "bucket": "string",

URI Request Parameters

The request uses the following URI parameters.

[appId \(p. 99\)](#)

The unique ID for the Amplify app.

Required: Yes

[clientToken \(p. 99\)](#)

The unique client token.

[environmentName \(p. 99\)](#)

The name of the backend environment that is part of the Amplify app.

Required: Yes

[id \(p. 99\)](#)

The unique ID for the component.

Required: Yes

Request Body

The request accepts the following data in JSON format.

[updatedComponent \(p. 99\)](#)

The configuration of the updated component.

Type: [UpdateComponentData \(p. 189\)](#) object

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

entity (p. 112)

Describes the configuration of the updated component.

Type: [Component \(p. 139\)](#) object

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 198\)](#).

InternalServerError

An internal error has occurred. Please retry your request.

HTTP Status Code: 500

InvalidArgumentException

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

ResourceConflictException

The resource specified in the request conflicts with an existing resource.

HTTP Status Code: 409

URI Request Parameters

The request uses the following URI parameters.

[appId \(p. 126\)](#)

The unique ID for the Amplify app.

Required: Yes

[clientToken \(p. 126\)](#)

The unique client token.

[environmentName \(p. 126\)](#)

The name of the backend environment that is part of the Amplify app.

Required: Yes

[id \(p. 126\)](#)

The unique ID for the form.

Required: Yes

Request Body

The request accepts the following data in JSON format.

[updatedForm \(p. 126\)](#)

The request accepts the following data in JSON format.

Type: [UpdateFormData \(p. 191\)](#) object

Required: Yes

Response Syntax

```

UpdateTheme

Updates an existing theme.

Request Syntax

```
PATCH /app/appId/environment/environmentName/themes/id?clientToken=clientToken HTTP/1.1
Content-type: application/json

{
  "updatedTheme": {
    "id": "string",
    "name": "string",
    "overrides": [
      {
        "key": "string",
        "value": {
          "children": [
            "ThemeValues"
          ],
          "value": "string"
        }
      }
    ],
    "values": [
      {
        "key": "string",
        "value": {
          "children": [
            "ThemeValues"
          ],
          "value": "string"
        }
      }
    ]
  }
}
```

URI Request Parameters

The request uses the following URI parameters.

appId (p. 132)

The unique ID for the Amplify app.

Required: Yes

clientToken (p. 132)

The unique client token.

environmentName (p. 132)

The name of the backend environment that is part of the Amplify app.

Required: Yes

id (p. 132)

The unique ID for the theme.

Required: Yes

Request Body

The request accepts the following data in JSON format.

updatedTheme (p. 132)

The configuration of the updated theme.

Type: [UpdateThemeData \(p. 193\)](#) object

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "entity": {
    "appId": "string",
    "createdAt": number,
    "environmentName": "string",
    "id": "string",
    "modifiedAt": number,
    "name": "string",
    "overrides": [
      {
        "key": "string",
        "value": {
          "children": [
            "ThemeValues"
          ],
          "value": "string"
        }
      }
    ],
    "tags": {
      "string" : "string"
    },
    "values": [
      {
        "key": "string",
        "value": {
          "children": [
            "ThemeValues"
          ],
          "value": "string"
        }
      }
    ]
  }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

entity (p. 133)

Describes the configuration of the updated theme.

Type: [Theme \(p. 184\)](#) object

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 198\)](#).

InternalServerError

An internal error has occurred. Please retry your request.

HTTP Status Code: 500

InvalidParameterException

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

ResourceConflictException

The resource specified in the request conflicts with an existing resource.

HTTP Status Code: 409

Data Types

The AWS Amplify UI Builder API contains several data types that various actions use. This section describes each data type in detail.

Note

The order of each element in a data type structure is not guaranteed. Applications should not assume a particular order.

The following data types are supported:

- [ActionParameters \(p. 137\)](#)
- [Component \(p. 139\)](#)
- [ComponentBindingPropertiesValue \(p. 142\)](#)
- [ComponentBindingPropertiesValueProperties \(p. 143\)](#)
- [ComponentChild \(p. 145\)](#)
- [ComponentConditionProperty \(p. 147\)](#)
- [ComponentDataConfiguration \(p. 149\)](#)
- [ComponentEvent \(p. 150\)](#)
- [ComponentProperty \(p. 151\)](#)
- [ComponentPropertyBindingProperties \(p. 154\)](#)
- [ComponentSummary \(p. 155\)](#)
- [ComponentVariant \(p. 156\)](#)
- [CreateComponentData \(p. 157\)](#)
- [CreateFormData \(p. 159\)](#)
- [CreateThemeData \(p. 161\)](#)
- [FieldConfig \(p. 162\)](#)
- [FieldInputConfig \(p. 163\)](#)
- [FieldPosition \(p. 166\)](#)
- [FieldValidationConfiguration \(p. 167\)](#)
- [Form \(p. 168\)](#)
- [FormBindingElement \(p. 170\)](#)
- [FormButton \(p. 171\)](#)
- [FormCTA \(p. 172\)](#)
- [FormDataConfig \(p. 173\)](#)
- [FormInputValueProperty \(p. 174\)](#)
- [FormStyle \(p. 175\)](#)
- [FormStyleConfig \(p. 176\)](#)
- [FormSummary \(p. 177\)](#)

ActionParameters

Represents the event action configuration for an element of a Component or ComponentChild. Use for the workflow feature in Amplify Studio that allows you to bind events and actions to components. ActionParameters defines the action that is performed when an event occurs on the component.

Contents

anchor

The HTML anchor link to the location to open. Specify this value for a navigation action.

Type: [ComponentProperty \(p. 151\)](#) object

Required: No

fields

A dictionary of key-value pairs mapping Amplify Studio properties to fields in a data model. Use when the action performs an operation on an Amplify DataStore model.

Type: String to [ComponentProperty \(p. 151\)](#) object map

Required: No

global

Specifies whether the user should be signed out globally. Specify this value for an auth sign out action.

Type: [ComponentProperty \(p. 151\)](#) object

Required: No

id

The unique ID of the component that the ActionParameters apply to.

Type: [ComponentProperty \(p. 151\)](#) object

Required: No

model

The name of the data model. Use when the action performs an operation on an Amplify DataStore model.

Type: String

Required: No

state

A key-value pair that specifies the state property name and its initial value.

Type: [MutationActionSetStateParameter \(p. 179\)](#) object

Required: No

target

The element within the same component to modify when the action occurs.

Type: [ComponentProperty \(p. 151\)](#) object

Required: No

type

The type of navigation action. Valid values are `url` and `anchor`. This value is required for a navigation action.

Type: [ComponentProperty \(p. 151\)](#) object

Required: No

url

The URL to the location to open. Specify this value for a navigation action.

Type: [ComponentProperty \(p. 151\)](#) object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

Component

Contains the configuration settings for a user interface (UI) element for an Amplify app. A component is configured as a primary, stand-alone UI element. Use `ComponentChild` to configure an instance of a Component. A `ComponentChild` instance inherits the configuration of the main Component.

Contents

appId

The unique ID of the Amplify app associated with the component.

Type: String

Required: Yes

bindingProperties

The information to connect a component's properties to data at runtime. You can't specify tags as a valid property for `bindingProperties`.

Type: String to [ComponentBindingPropertiesValue \(p. 142\)](#) object map

Required: Yes

children

A list of the component's `ComponentChild` instances.

Type: Array of [ComponentChild \(p. 145\)](#) objects

Required: No

collectionProperties

The data binding configuration for the component's properties. Use this for a collection component. You can't specify tags as a valid property for `collectionProperties`.

Type: String to [ComponentDataConfiguration \(p. 149\)](#) object map

Required: No

componentType

The type of the component. This can be an Amplify custom UI component or another custom component.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

createdAt

The time that the component was created.

Type: Timestamp

Required: Yes

environmentName

The name of the backend environment that is a part of the Amplify app.

Type: String

Required: Yes

events

Describes the events that can be raised on the component. Use for the workflow feature in Amplify Studio that allows you to bind events and actions to components.

Type: String to [ComponentEvent \(p. 150\)](#) object map

Required: No

id

The unique ID of the component.

Type: String

Required: Yes

modifiedAt

The time that the component was modified.

Type: Timestamp

Required: No

name

The name of the component.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

overrides

Describes the component's properties that can be overriden in a customized instance of the component. You can't specify tags as a valid property for `overrides`.

Type: String to string to string map map

Required: Yes

properties

Describes the component's properties. You can't specify tags as a valid property for `properties`.

Type: String to [ComponentProperty \(p. 151\)](#) object map

Required: Yes

schemaVersion

The schema version of the component when it was imported.

Type: String

Required: No

sourcId

The unique ID of the component in its original source system, such as Figma.

Type: String

Required: No

tags

One or more key-value pairs to use when tagging the component.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Value Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

variants

A list of the component's variants. A variant is a unique style configuration of a main component.

Type: Array of [ComponentVariant \(p. 156\)](#) objects

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

ComponentBindingPropertiesValue

Represents the data binding configuration for a component at runtime. You can use ComponentBindingPropertiesValue to add exposed properties to a component to allow different values to be entered when a component is reused in different places in an app.

Contents

bindingProperties

Describes the properties to customize with data at runtime.

Type: [ComponentBindingPropertiesValueProperties \(p. 143\)](#) object

Required: No

defaultValue

The default value of the property.

Type: String

Required: No

type

The property type.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

ComponentBindingPropertiesValueProperties

Represents the data binding configuration for a specific property using data stored in AWS. For AWS connected properties, you can bind a property to data stored in an Amazon S3 bucket, an Amplify DataStore model or an authenticated user attribute.

Contents

bucket

An Amazon S3 bucket.

Type: String

Required: No

defaultValue

The default value to assign to the property.

Type: String

Required: No

field

The field to bind the data to.

Type: String

Required: No

key

The storage key for an Amazon S3 bucket.

Type: String

Required: No

model

An Amplify DataStore model.

Type: String

Required: No

predicates

A list of predicates for binding a component's properties to data.

Type: Array of [Predicate \(p. 180\)](#) objects

Required: No

slotName

The name of a component slot.

Type: String

Required: No

userAttribute

An authenticated user attribute.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

ComponentChild

A nested UI configuration within a parent Component.

Contents

children

The list of ComponentChild instances for this component.

Type: Array of [ComponentChild \(p. 145\)](#) objects

Required: No

componentType

The type of the child component.

Type: String

Required: Yes

events

Describes the events that can be raised on the child component. Use for the workflow feature in Amplify Studio that allows you to bind events and actions to components.

Type: String to [ComponentEvent \(p. 150\)](#) object map

Required: No

name

The name of the child component.

Type: String

Required: Yes

properties

Describes the properties of the child component. You can't specify tags as a valid property for properties.

Type: String to [ComponentProperty \(p. 151\)](#) object map

Required: Yes

sourceId

The unique ID of the child component in its original source system, such as Figma.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)

- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

ComponentConditionProperty

Represents a conditional expression to set a component property. Use ComponentConditionProperty to set a property to different values conditionally, based on the value of another property.

Contents

else

The value to assign to the property if the condition is not met.

Type: [ComponentProperty \(p. 151\)](#) object

Required: No

field

The name of a field. Specify this when the property is a data model.

Type: String

Required: No

operand

The value of the property to evaluate.

Type: String

Required: No

operandType

The type of the property to evaluate.

Type: String

Required: No

operator

The operator to use to perform the evaluation, such as eq to represent equals.

Type: String

Required: No

property

The name of the conditional property.

Type: String

Required: No

then

The value to assign to the property if the condition is met.

Type: [ComponentProperty \(p. 151\)](#) object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

ComponentDataConfiguration

Describes the configuration for binding a component's properties to data.

Contents

identifiers

A list of IDs to use to bind data to a component. Use this property to bind specifically chosen data, rather than data retrieved from a query.

Type: Array of strings

Required: No

model

The name of the data model to use to bind data to a component.

Type: String

Required: Yes

predicate

Represents the conditional logic to use when binding data to a component. Use this property to retrieve only a subset of the data in a collection.

Type: [Predicate \(p. 180\)](#) object

Required: No

sort

Describes how to sort the component's properties.

Type: Array of [SortProperty \(p. 183\)](#) objects

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

ComponentEvent

Describes the configuration of an event. You can bind an event and a corresponding action to a Component or a ComponentChild. A button click is an example of an event.

Contents

action

The action to perform when a specific event is raised.

Type: String

Required: No

bindingEvent

Binds an event to an action on a component. When you specify a bindingEvent, the event is called when the action is performed.

Type: String

Required: No

parameters

Describes information about the action.

Type: [ActionParameters \(p. 137\)](#) object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

ComponentProperty

Describes the configuration for all of a component's properties. Use ComponentProperty to specify the values to render or bind by default.

Contents

bindingProperties

The information to bind the component property to data at runtime.

Type: [ComponentPropertyBindingProperties \(p. 154\)](#) object

Required: No

bindings

The information to bind the component property to form data.

Type: String to [FormBindingElement \(p. 170\)](#) object map

Required: No

collectionBindingProperties

The information to bind the component property to data at runtime. Use this for collection components.

Type: [ComponentPropertyBindingProperties \(p. 154\)](#) object

Required: No

componentName

The name of the component that is affected by an event.

Type: String

Required: No

concat

A list of component properties to concatenate to create the value to assign to this component property.

Type: Array of [ComponentProperty \(p. 151\)](#) objects

Required: No

condition

The conditional expression to use to assign a value to the component property.

Type: [ComponentConditionProperty \(p. 147\)](#) object

Required: No

configured

Specifies whether the user configured the property in Amplify Studio after importing it.

Type: Boolean

Required: No

defaultValue

The default value to assign to the component property.

Type: String

Required: No

event

An event that occurs in your app. Use this for workflow data binding.

Type: String

Required: No

importedValue

The default value assigned to the property when the component is imported into an app.

Type: String

Required: No

model

The data model to use to assign a value to the component property.

Type: String

Required: No

property

The name of the component's property that is affected by an event.

Type: String

Required: No

type

The component type.

Type: String

Required: No

userAttribute

An authenticated user attribute to use to assign a value to the component property.

Type: String

Required: No

value

The value to assign to the component property.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

ComponentPropertyBindingProperties

Associates a component property to a binding property. This enables exposed properties on the top level component to propagate data to the component's property values.

Contents

field

The data field to bind the property to.

Type: String

Required: No

property

The component property to bind to the data field.

Type: String

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

ComponentSummary

Contains a summary of a component. This is a read-only data type that is returned by `ListComponents`.

Contents

appId

The unique ID of the Amplify app associated with the component.

Type: String

Required: Yes

componentType

The component type.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

environmentName

The name of the backend environment that is a part of the Amplify app.

Type: String

Required: Yes

id

The unique ID of the component.

Type: String

Required: Yes

name

The name of the component.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

ComponentVariant

Describes the style configuration of a unique variation of a main component.

Contents

overrides

The properties of the component variant that can be overriden when customizing an instance of the component. You can't specify tags as a valid property for `overrides`.

Type: String to string to string map map

Required: No

variantValues

The combination of variants that comprise this variant. You can't specify tags as a valid property for `variantValues`.

Type: String to string map

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

CreateComponentData

Represents all of the information that is required to create a component.

Contents

bindingProperties

The data binding information for the component's properties.

Type: String to [ComponentBindingPropertiesValue \(p. 142\)](#) object map

Required: Yes

children

A list of child components that are instances of the main component.

Type: Array of [ComponentChild \(p. 145\)](#) objects

Required: No

collectionProperties

The data binding configuration for customizing a component's properties. Use this for a collection component.

Type: String to [ComponentDataConfiguration \(p. 149\)](#) object map

Required: No

componentType

The component type. This can be an Amplify custom UI component or another custom component.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

events

The event configuration for the component. Use for the workflow feature in Amplify Studio that allows you to bind events and actions to components.

Type: String to [ComponentEvent \(p. 150\)](#) object map

Required: No

name

The name of the component

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

overrides

Describes the component properties that can be overriden to customize an instance of the component.

Type: String to string to string map map

Required: Yes

properties

Describes the component's properties.

Type: String to [ComponentProperty \(p. 151\)](#) object map

Required: Yes

schemaVersion

The schema version of the component when it was imported.

Type: String

Required: No

sourceId

The unique ID of the component in its original source system, such as Figma.

Type: String

Required: No

tags

One or more key-value pairs to use when tagging the component data.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^(?!aws:)[a-zA-Z+-=._:/]+\$

Value Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

variants

A list of the unique variants of this component.

Type: Array of [ComponentVariant \(p. 156\)](#) objects

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

CreateFormData

Represents all of the information that is required to create a form.

Contents

cta

The FormCTA object that stores the call to action configuration for the form.

Type: [FormCTA \(p. 172\)](#) object

Required: No

dataType

The type of data source to use to create the form.

Type: [FormDataConfig \(p. 173\)](#) object

Required: Yes

fields

The configuration information for the form's fields.

Type: String to [FieldConfig \(p. 162\)](#) object map

Required: Yes

formActionType

Specifies whether to perform a create or update action on the form.

Type: String

Valid Values: `create` | `update`

Required: Yes

name

The name of the form.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

schemaVersion

The schema version of the form.

Type: String

Required: Yes

sectionalElements

The configuration information for the visual helper elements for the form. These elements are not associated with any data.

Type: String to [SectionalElement \(p. 182\)](#) object map

Required: Yes

style

The configuration for the form's style.

Type: [FormStyle \(p. 175\)](#) object

Required: Yes

tags

One or more key-value pairs to use when tagging the form data.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Value Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

CreateThemeData

Represents all of the information that is required to create a theme.

Contents

name

The name of the theme.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

overrides

Describes the properties that can be overriden to customize an instance of the theme.

Type: Array of [ThemeValues \(p. 188\)](#) objects

Required: No

tags

One or more key-value pairs to use when tagging the theme data.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Value Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

values

A list of key-value pairs that defines the properties of the theme.

Type: Array of [ThemeValues \(p. 188\)](#) objects

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

FieldConfig

Describes the configuration information for a field in a table.

Contents

excluded

Specifies whether to hide a field.

Type: Boolean

Required: No

inputType

Describes the configuration for the default input value to display for a field.

Type: [FieldInputConfig \(p. 163\)](#) object

Required: No

label

The label for the field.

Type: String

Required: No

position

Specifies the field position.

Type: [FieldPosition \(p. 166\)](#) object

Required: No

validations

The validations to perform on the value in the field.

Type: Array of [FieldValidationConfiguration \(p. 167\)](#) objects

Required: No

See Also

FieldInputConfig

Describes the configuration for the default input values to display for a field.

Contents

defaultChecked

Specifies whether a field has a default value.

Type: Boolean

Required: No

defaultCountryCode

The default country code for a phone number.

Type: String

Required: No

defaultValue

The default value for the field.

Type: String

Required: No

descriptiveText

The text to display to describe the field.

Type: String

Required: No

isArray

Specifies whether to render the field as an array. This property is ignored if the `dataSourceType` for the form is a Data Store.

Type: Boolean

Required: No

maxValue

The maximum value to display for the field.

Type: Float

Required: No

minValue

The minimum value to display for the field.

Type: Float

Required: No

name

The name of the field.

Type: String

Required: No

placeholder

The text to display as a placeholder for the field.

Type: String

Required: No

readOnly

Specifies a read only field.

Type: Boolean

Required: No

required

Specifies a field that requires input.

Type: Boolean

Required: No

step

The stepping increment for a numeric value in a field.

Type: Float

Required: No

type

The input type for the field.

Type: String

Required: Yes

value

The value for the field.

Type: String

Required: No

valueMappings

The information to use to customize the input fields with data at runtime.

Type: [ValueMappings \(p. 195\)](#) object

Required: No

See Also

- [AWS SDK for C++](#)

- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

FieldPosition

Describes the field position.

Contents

below

The field position is below the field specified by the string.

Type: String

Required: No

fixed

The field position is fixed and doesn't change in relation to other fields.

Type: String

Valid Values: `first`

Required: No

rightOf

The field position is to the right of the field specified by the string.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

FieldValidationConfiguration

Describes the validation configuration for a field.

Contents

numValues

The validation to perform on a number value.

Type: Array of integers

Required: No

strValues

The validation to perform on a string value.

Type: Array of strings

Required: No

type

The validation to perform on an object type.

Type: String

Required: Yes

validationMessage

The validation message to display.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

Form

Contains the configuration settings for a Form user interface (UI) element for an Amplify app. A form is a component you can add to your project by specifying a data source as the default configuration for the form.

Contents

appId

The unique ID of the Amplify app associated with the form.

Type: String

Required: Yes

cta

Stores the call to action configuration for the form.

Type: [FormCTA \(p. 172\)](#) object

Required: No

dataType

The type of data source to use to create the form.

Type: [FormDataTypeConfig \(p. 173\)](#) object

Required: Yes

environmentName

The name of the backend environment that is a part of the Amplify app.

Type: String

Required: Yes

fields

Stores the information about the form's fields.

Type: String to [FieldConfig \(p. 162\)](#) object map

Required: Yes

formActionType

The operation to perform on the specified form.

Type: String

Valid Values: `create` | `update`

Required: Yes

id

The unique ID of the form.

Type: String

Required: Yes

name

The name of the form.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

schemaVersion

The schema version of the form when it was imported.

Type: String

Required: Yes

sectionalElements

Stores the visual helper elements for the form that are not associated with any data.

Type: String to [SectionalElement \(p. 182\)](#) object map

Required: Yes

style

Stores the configuration for the form's style.

Type: [FormStyle \(p. 175\)](#) object

Required: Yes

tags

One or more key-value pairs to use when tagging the form.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^(?!aws:)[a-zA-Z+-=._:/]+\$

Value Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

See Also

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

FormBindingElement

Describes how to bind a component property to form data.

Contents

element

The name of the component to retrieve a value from.

Type: String

Required: Yes

property

The property to retrieve a value from.

Type: String

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

FormButton

Describes the configuration for a button UI element that is a part of a form.

Contents

children

Describes the button's properties.

Type: String

Required: No

excluded

Specifies whether the button is visible on the form.

Type: Boolean

Required: No

position

The position of the button.

Type: [FieldPosition \(p. 166\)](#) object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

FormCTA

Describes the call to action button configuration for the form.

Contents

cancel

Displays a cancel button.

Type: [FormButton \(p. 171\)](#) object

Required: No

clear

Displays a clear button.

Type: [FormButton \(p. 171\)](#) object

Required: No

position

The position of the button.

Type: String

Valid Values: top | bottom | top_and_bottom

Required: No

submit

Displays a submit button.

Type: [FormButton \(p. 171\)](#) object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

FormDataTypeConfig

Describes the data type configuration for the data source associated with a form.

Contents

dataSourceType

The data source type, either an Amplify DataStore model or a custom data type.

Type: String

Valid Values: DataStore | Custom

Required: Yes

dataTypeName

The unique name of the data type you are using as the data source for the form.

Type: String

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

FormInputValueProperty

Describes the configuration for an input field on a form. Use `FormInputValueProperty` to specify the values to render or bind by default.

Contents

value

The value to assign to the input field.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

FormStyle

Describes the configuration for the form's style.

Contents

horizontalGap

The spacing for the horizontal gap.

Type: [FormStyleConfig \(p. 176\)](#) object

Required: No

outerPadding

The size of the outer padding for the form.

Type: [FormStyleConfig \(p. 176\)](#) object

Required: No

verticalGap

The spacing for the vertical gap.

Type: [FormStyleConfig \(p. 176\)](#) object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

FormStyleConfig

Describes the configuration settings for the form's style properties.

Contents

tokenReference

A reference to a design token to use to bind the form's style properties to an existing theme.

Type: String

Required: No

value

The value of the style setting.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

FormSummary

Describes the basic information about a form.

Contents

appId

The unique ID for the app associated with the form summary.

Type: String

Required: Yes

dataType

The form's data source type.

Type: [FormDataConfig \(p. 173\)](#) object

Required: Yes

environmentName

The name of the backend environment that is part of the Amplify app.

Type: String

Required: Yes

formActionType

The type of operation to perform on the form.

Type: String

Valid Values: `create` | `update`

Required: Yes

id

The ID of the form.

Type: String

Required: Yes

name

The name of the form.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

MutationActionSetStateParameter

Represents the state configuration when an action modifies a property of another element within the same component.

Contents

componentName

The name of the component that is being modified.

Type: String

Required: Yes

property

The name of the component property to apply the state configuration to.

Type: String

Required: Yes

set

The state configuration to assign to the property.

Type: [ComponentProperty \(p. 151\)](#) object

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

Predicate

Stores information for generating Amplify DataStore queries. Use a **Predicate** to retrieve a subset of the data in a collection.

Contents

and

A list of predicates to combine logically.

Type: Array of [Predicate \(p. 180\)](#) objects

Required: No

field

The field to query.

Type: String

Required: No

operand

The value to use when performing the evaluation.

Type: String

Required: No

operator

The operator to use to perform the evaluation.

Type: String

Required: No

or

A list of predicates to combine logically.

Type: Array of [Predicate \(p. 180\)](#) objects

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

PutMetadataFlagBody

Stores the metadata information about a feature on a form.

Contents

newValue

The new information to store.

Type: String

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

SectionalElement

Stores the configuration information for a visual helper element for a form. A sectional element can be a header, a text block, or a divider. These elements are static and not associated with any data.

Contents

level

Specifies the size of the font for a Heading sectional element. Valid values are 1 | 2 | 3 | 4 | 5 | 6.

Type: Integer

Required: No

orientation

Specifies the orientation for a Divider sectional element. Valid values are horizontal or vertical.

Type: String

Required: No

position

Specifies the position of the text in a field for a Text sectional element.

Type: [FieldPosition \(p. 166\)](#) object

Required: No

text

The text for a Text sectional element.

Type: String

Required: No

type

The type of sectional element. Valid values are Heading, Text, and Divider.

Type: String

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

SortProperty

Describes how to sort the data that you bind to a component.

Contents

direction

The direction of the sort, either ascending or descending.

Type: String

Valid Values: ASC | DESC

Required: Yes

field

The field to perform the sort on.

Type: String

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

Theme

A theme is a collection of style settings that apply globally to the components associated with an Amplify application.

Contents

appId

The unique ID for the Amplify app associated with the theme.

Type: String

Required: Yes

createdAt

The time that the theme was created.

Type: Timestamp

Required: Yes

environmentName

The name of the backend environment that is a part of the Amplify app.

Type: String

Required: Yes

id

The ID for the theme.

Type: String

Required: Yes

modifiedAt

The time that the theme was modified.

Type: Timestamp

Required: No

name

The name of the theme.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

overrides

Describes the properties that can be overriden to customize a theme.

Type: Array of [ThemeValues \(p. 188\)](#) objects

Required: No

tags

One or more key-value pairs to use when tagging the theme.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=.:_:/]+$`

Value Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

values

A list of key-value pairs that defines the properties of the theme.

Type: Array of [ThemeValues \(p. 188\)](#) objects

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

ThemeSummary

Describes the basic information about a theme.

Contents

appId

The unique ID for the app associated with the theme summary.

Type: String

Required: Yes

environmentName

The name of the backend environment that is part of the Amplify app.

Type: String

Required: Yes

id

The ID of the theme.

Type: String

Required: Yes

name

The name of the theme.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

ThemeValue

Describes the configuration of a theme's properties.

Contents

children

A list of key-value pairs that define the theme's properties.

Type: Array of [ThemeValues \(p. 188\)](#) objects

Required: No

value

The value of a theme property.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

ThemeValues

A key-value pair that defines a property of a theme.

Contents

key

The name of the property.

Type: String

Required: No

value

The value of the property.

Type: [ThemeValue \(p. 187\)](#) object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

UpdateComponentData

Updates and saves all of the information about a component, based on component ID.

Contents

bindingProperties

The data binding information for the component's properties.

Type: String to [ComponentBindingPropertiesValue \(p. 142\)](#) object map

Required: No

children

The components that are instances of the main component.

Type: Array of [ComponentChild \(p. 145\)](#) objects

Required: No

collectionProperties

The configuration for binding a component's properties to a data model. Use this for a collection component.

Type: String to [ComponentDataConfiguration \(p. 149\)](#) object map

Required: No

componentType

The type of the component. This can be an Amplify custom UI component or another custom component.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: No

events

The event configuration for the component. Use for the workflow feature in Amplify Studio that allows you to bind events and actions to components.

Type: String to [ComponentEvent \(p. 150\)](#) object map

Required: No

id

The unique ID of the component to update.

Type: String

Required: No

name

The name of the component to update.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: No

overrides

Describes the properties that can be overriden to customize the component.

Type: String to string to string map map

Required: No

properties

Describes the component's properties.

Type: String to [ComponentProperty \(p. 151\)](#) object map

Required: No

schemaVersion

The schema version of the component when it was imported.

Type: String

Required: No

sourceld

The unique ID of the component in its original source system, such as Figma.

Type: String

Required: No

variants

A list of the unique variants of the main component being updated.

Type: Array of [ComponentVariant \(p. 156\)](#) objects

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

UpdateFormData

Updates and saves all of the information about a form, based on form ID.

Contents

cta

The FormCTA object that stores the call to action configuration for the form.

Type: [FormCTA \(p. 172\)](#) object

Required: No

dataType

The type of data source to use to create the form.

Type: [FormDataConfig \(p. 173\)](#) object

Required: No

fields

The configuration information for the form's fields.

Type: String to [FieldConfig \(p. 162\)](#) object map

Required: No

formActionType

Specifies whether to perform a create or update action on the form.

Type: String

Valid Values: `create` | `update`

Required: No

name

The name of the form.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: No

schemaVersion

The schema version of the form.

Type: String

Required: No

sectionalElements

The configuration information for the visual helper elements for the form. These elements are not associated with any data.

Type: String to [SectionalElement \(p. 182\)](#) object map

Required: No

style

The configuration for the form's style.

Type: [FormStyle \(p. 175\)](#) object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

UpdateThemeData

Saves the data binding information for a theme.

Contents

id

The unique ID of the theme to update.

Type: String

Required: No

name

The name of the theme to update.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: No

overrides

Describes the properties that can be overriden to customize the theme.

Type: Array of [ThemeValues \(p. 188\)](#) objects

Required: No

values

A list of key-value pairs that define the theme's properties.

Type: Array of [ThemeValues \(p. 188\)](#) objects

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

ValueMapping

Associates a complex object with a display value. Use ValueMapping to store how to represent complex objects when they are displayed.

Contents

displayValue

The value to display for the complex object.

Type: [FormInputValueProperty \(p. 174\)](#) object

Required: No

value

The complex object.

Type: [FormInputValueProperty \(p. 174\)](#) object

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

ValueMappings

Represents the data binding configuration for a value map.

Contents

values

The value and display value pairs.

Type: Array of [ValueMapping \(p. 194\)](#) objects

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

Common Parameters

The following list contains the parameters that all actions use for signing Signature Version 4 requests with a query string. Any action-specific parameters are listed in the topic for that action. For more information about Signature Version 4, see [Signature Version 4 Signing Process](#) in the *Amazon Web Services General Reference*.

Action

The action to be performed.

Type: string

Required: Yes

Version

The API version that the request is written for, expressed in the format YYYY-MM-DD.

Type: string

Required: Yes

X-Amz-Algorithm

The hash algorithm that you used to create the request signature.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Valid Values: AWS4-HMAC-SHA256

Required: Conditional

X-Amz-Credential

The credential scope value, which is a string that includes your access key, the date, the region you are targeting, the service you are requesting, and a termination string ("aws4_request"). The value is expressed in the following format: *access_key/YYYYMMDD/region/service/aws4_request*.

For more information, see [Task 2: Create a String to Sign for Signature Version 4](#) in the *Amazon Web Services General Reference*.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

X-Amz-Date

The date that is used to create the signature. The format must be ISO 8601 basic format (YYYYMMDD'T'HHMMSS'Z'). For example, the following date time is a valid X-Amz-Date value: 20120325T120000Z.

Condition: X-Amz-Date is optional for all requests; it can be used to override the date used for signing requests. If the Date header is specified in the ISO 8601 basic format, X-Amz-Date is

not required. When X-Amz-Date is used, it always overrides the value of the Date header. For more information, see [Handling Dates in Signature Version 4](#) in the *Amazon Web Services General Reference*.

Type: string

Required: Conditional

X-Amz-Security-Token

The temporary security token that was obtained through a call to AWS Security Token Service (AWS STS). For a list of services that support temporary security credentials from AWS Security Token Service, go to [AWS Services That Work with IAM](#) in the *IAM User Guide*.

Condition: If you're using temporary security credentials from the AWS Security Token Service, you must include the security token.

Type: string

Required: Conditional

X-Amz-Signature

Specifies the hex-encoded signature that was calculated from the string to sign and the derived signing key.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

X-Amz-SignedHeaders

Specifies all the HTTP headers that were included as part of the canonical request. For more information about specifying signed headers, see [Task 1: Create a Canonical Request For Signature Version 4](#) in the *Amazon Web Services General Reference*.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

Common Errors

This section lists the errors common to the API actions of all AWS services. For errors specific to an API action for this service, see the topic for that API action.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 400

IncompleteSignature

The request signature does not conform to AWS standards.

HTTP Status Code: 400

InternalFailure

The request processing has failed because of an unknown error, exception or failure.

HTTP Status Code: 500

InvalidAction

The action or operation requested is invalid. Verify that the action is typed correctly.

HTTP Status Code: 400

InvalidClientId

The X.509 certificate or AWS access key ID provided does not exist in our records.

HTTP Status Code: 403

InvalidParameterCombination

Parameters that must not be used together were used together.

HTTP Status Code: 400

InvalidParameterValue

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

InvalidQueryParameter

The AWS query string is malformed or does not adhere to AWS standards.

HTTP Status Code: 400

MalformedQueryString

The query string contains a syntax error.

HTTP Status Code: 404

MissingAction

The request is missing an action or a required parameter.

HTTP Status Code: 400

MissingAuthenticationToken

The request must contain either a valid (registered) AWS access key ID or X.509 certificate.

HTTP Status Code: 403

MissingParameter

A required parameter for the specified action is not supplied.

HTTP Status Code: 400

NotAuthorized

You do not have permission to perform this action.

HTTP Status Code: 400

OptInRequired

The AWS access key ID needs a subscription for the service.

HTTP Status Code: 403

RequestExpired

The request reached the service more than 15 minutes after the date stamp on the request or more than 15 minutes after the request expiration date (such as for pre-signed URLs), or the date stamp on the request is more than 15 minutes in the future.

HTTP Status Code: 400

ServiceUnavailable

The request has failed due to a temporary failure of the server.

HTTP Status Code: 503

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 400

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400
